

Cintoflex Polyethylene Fence

An economical alternative to welded wire.

What is Cintoflex?

Manufactured from nontoxic, tough, flexible, high density black polyethylene with characteristics that withstand the effects of weather (extremes of hot and cold, ultraviolet rays) and contaminants, Cintoflex is produced by a patented stretching and extruding process. As a result, the mesh is manufactured as a continuous net, **possessing strength normally associated with wire netting.** All Cintoflex products are available in various heights. Each product, grid size and height is recommended for a particular use.

Has been used, with proper framework, to meet pool code - check with your local building department.

Utility fence, area/access restrictions, parking lots and property delineation.

Temporary fencing.

Sporting area delineation such as tennis, golf and soccer courts.

Ball stop fencing.

As sport and recreational fence.

In landfills, to catch blowing debris without restricting air flow.

Child's playground limitation.

As livestock and agriculture fencing for deer control around crops, gardens and perimeters, and as poultry fence for temporary pens, sick pens or runs.

In mining, as a cover for cyanide ponds to protect birds.

Cintoflex has many uses:

Cintoflex C 1 3/4" x 1 3/4" Grid

Non-visibility and maximum strength! Recommendations:

4' - an informal, economical replacement for standard welded wire.

5' - protect foundation plantings & flower beds from deer intrusion.

6' - general purpose & temporary fencing where a greater degree of safety is needed.

7.5' x 100' & 330' - our standard, **economical** perimeter enclosure deer fencing for areas not experiencing high pressure deer situations.

10' and 15' - the same product as our standard deer fencing. Great for uneven terrains that might require extra height protection.

Cintoflex P 1 3/4" x 1 3/4" Grid

7.5' x 164' - our **premium**, perimeter deer fencing designed for **high pressure** deer exclusion where deer habits & territories have previously been established. **65% Stronger!**

Cintoflex D 1" x 1 1/2" Grid

Perfect for wrapping shrubs and strong enough in its 15' height to be the perfect golf ball safety netting. Use as an excellent solution around tennis courts and at sports facilities where the fencing height is important.

Cintoflex E 1/2" x 3/4" Grid

A slightly lighter weight, yet highly effective shrub wrap. Can be used to protect against predatory birds, makes a high strength, effective pond covering, and is also good as side and roof for aviary enclosures.

Cintoflex M 3/4" x 1" Grid

A slightly smaller grid which is excellent as high strength pond covering, aviary inclusion or exclusion, and for rafter barriers. Used in the poultry industry as flooring, poultry fencing, temporary runs, sick pens or runs. Washed easily and withstands exposure to the acidic elements common in poultry farming. Excellent as protection on berry bushes. Also, a perfect solution for around tennis courts and at sports facilities, where fencing height is important.

Cintoflex Deer Control

An economical alternative to welded wire

You too can control deer damage!

One of the most popular uses for Cintoflex is deer control. Keep deer from damaging specific gardens or landscaped areas on the property, or from entering the entire property. Made of polypropylene (plastic), it has many benefits:

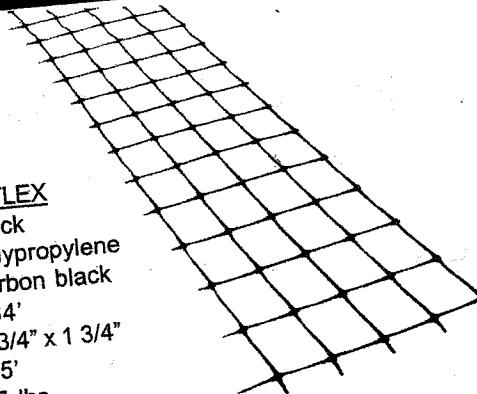

- economical (*less than a buck a foot!*)
- light-weight, flexible plastic
- easy to install by one person
- U.V. stabilized polypropylene for long life
- unaffected by extreme temperatures & severe weather conditions
- will not rust, rot or discolor
- does not have sharp edges
- does not deform
- no special cutting tools are required
- maintenance free - no sanding, painting or finishing
- is virtually invisible, as it blends in with nature
- Cintoflex is recycleable, making it environmentally friendly
- it can be shipped via UPS
- extremely strong
- is reusable
- versatile - can be used for many applications
- nontoxic

And it is proven to be effective!

Product Specifications

	<u>C-FLEX</u>	<u>P-FLEX</u>
color	black	black
polymer	polypropylene	polypropylene
UV stabilizer	carbon black	carbon black
standard length	330'	164'
mesh size	1 3/4" x 1 3/4"	1 3/4" x 1 3/4"
widths	4', 5', 6', 7', 10', 15'	7.5'
weight	41 lbs	37 lbs
